## Bolgiano's Fall Bulbs

## HOW TO PLANT

OUTDOOR CULTURE-Plant the bulbs as soon after September as possible to enable the roots to make good growth before the cold weather sets in. They can, however, be planted from September until the ground becomes frozen. They require a moderately rich soil, or else apply Loma, Sheep Manure or Bone Meal. How far apart and how deep to plant the different bulbs is shown in the accompanying chart. When the ground freezes cover with 3 or 4 inches of leaves or dry litter. Rake off after frost.

INDOOR CULTURE-Piant hyacinths, tulips and narcissus in a sandy soil. Give a good soaking after planting and water once or twice a week during the time the bulb makes root. After planting keep in a dark place in the house and keep a paper bag over the pot until the sprout is about three inches long. They may then be brought to the light and bag removed.

GROWING PAPER WHITE NARCISSUS IN WATER-Place a dozen bulbs in a shallow bowl, cover with small stones and keep filled with water. Place a few small pieces of charcoal in the bottom of the bowl to keep the water from fouling. Keep in a moderately temperate room. They require no care, no attention. They keep on growing and produce a beautiful flowering plant in about six weeks.
